

## List of Entries Used

### Field - Material

MATERIAL is an eight character field. To ensure that all items are reported, when searching, use the beginning letters of the MATERIAL, followed by the wild card (\*). This permits the search to include any attached designators. MATERIALS which have had the spelling modernized have the assumed designator, “=” attached. Using the wild card character and the beginning of the word will also accommodate several longer truncated words, such as Chocolate or Cochineal

Abbreviations are used in the MATERIAL field usually where there a compound word, such as “bell metal” or “lignum vitae.”

Abbreviations in the MATERIAL field are:

BEL MET:	Bell Metal	LIGN VIT:	Lignum Vitae
BLK WAL:	Black Walnut	PR:	Princes
FR:	French	QU:	Queen
		WH:	White

Search Examples:

1- When searching for Japan, by entering “Japan” in the search, the researcher will find only “Japan” items in the database. But by adding the wild card character “\*” as in “japan\*” - all japan or japaned items will be reported.

2- A search for “Wal” yields all walnut items, but by using the wild card character before and after “wal” as in “\*wal\*” the search will produce all walnut and black walnut items. The wild card character before “wal” allows the filter to find the item any place in the field.
